The morning check

Five things, every morning, before anything else. Hang it by the door and mark it with a dry-wipe pen — one sheet does a week, wipe it on Sunday night. A skipped day costs a tray three weeks from now.

CHECK	MON	TUE	WED	THU	FRI	SAT	SUN
Temperature 18–24 °C, read at tray height	☐	☐	☐	☐	☐	☐	☐
Humidity 40–60 %, and the room feels damp not wet	☐	☐	☐	☐	☐	☐	☐
Air fans running, 10 minutes in every 30	☐	☐	☐	☐	☐	☐	☐
Water tank level, pump wet, no standing water in a tray	☐	☐	☐	☐	☐	☐	☐
Anything that is not a microgreen mould, flies, a sour smell, a bald tray	☐	☐	☐	☐	☐	☐	☐

Write the two numbers down — the thermometer and the hygrometer, once a day. The controller log is not the room.

READING	MON	TUE	WED	THU	FRI	SAT	SUN
°C at tray height							
% humidity							

NOTES — WHAT CHANGED, AND WHAT YOU DID ABOUT IT

If it is wrong today: mould in one tray — out of the room in a bag, do not open it to look; a bald patch — check the mist and the warmth; a still room — fans before heat, always.

The sow log

ONE LINE A SOWING
FORM 02

One line a sowing. Variety, how many trays, and which section they went into — stock order, scheduled growth, or ad hoc. The blackout-out date is the day the stack comes apart; count it forward from the sow date by the variety sheet, not by habit.

SOW DATE	VARIETY	TRAYS	SECTION	GRAMS SEED	OUT OF BLACKOUT	INITIALS

Sections: SO stock order · SG scheduled growth · AH ad hoc. Every tray carries its tag from this line — variety, sow date, tray count — and the tag travels to the punnet.

Harvest and dispatch

Cut, weighed, packed, out. The grams are the number the room lives on — the model says 200–300 g a tray and the research average is 136 g, so the only figure worth arguing about is this column.

DATE	VARIETY	TRAYS	TOTAL G	G A TRAY	PACKED AS	BATCH CODE	TO

Packed as: 100 g clamshell · 250 g bag · 500 g bag. **Cold:** in the cold room inside the hour, 5 °C, covered. **Out:** under two hours door to door, Tuesday and Friday harvests the same day.

Clear and clean, the same afternoon: spent tray out — medium and roots to compost, mat to the bin, never beside the rack · tray washed, sanitised, dried upside down · level wiped · floor swept · anything mouldy gone from the room.

The weekly clean

Once a week, the whole room, in this order — top down, dry to wet, and the waste last. Daily is the floor, the bench and the tools. Sign the week off at the bottom: an unsigned clean is a clean nobody did.

	WHAT	HOW	DONE	INIT.
☐	**Racks and shelves**	Wipe every level, top to bottom, sanitiser then dry		
☐	**Trays and domes**	Every tray in the room washed and sanitised, not only the empty ones		
☐	**Lights**	Dust off the tubes — a dusty tube is a dim tray		
☐	**Fans and filters**	Grilles off, washed, dried, back on		
☐	**Floor and drains**	Sweep, wash, sanitiser down the drain		
☐	**Walls and door handles**	Wipe down to shoulder height		
☐	**Water tank**	Drain, scrub, refill, check the float switches		
☐	**Tools**	Scissors, knives, press, harvest board — washed and sharpened		
☐	**Cold room**	Wipe shelves, check the temperature against the thermometer		
☐	**Packaging**	Count stock, check labels and batch-code pen		
☐	**Seed store**	Closed, dry, labelled, nothing open on the bench		
☐	**Waste out**	Green waste off the property, not in the yard bin		

ANYTHING FOUND, AND WHAT WAS DONE

Week of _____ · **Deep clean done by** _____ · **Checked by** _____
